

Empathy Map

Date	04 October 2026
Team ID	POCKETSMART-TEAM
Project Name	PocketSmart AI – Smart Budget & Recommendation Assistant using Gemini Models
Maximum Marks	2 Marks

Target User: Person Planning a Home Upgrade, a Party or a Jewelry Purchase on a Fixed Budget

Area	Observations
Says	“I have ₹X to spend. Where should it go?” “I do not want to go over budget.”
Thinks	“Is this split realistic for India?” “Where can I actually buy these items?”
Does	Enters a budget and requirements, reviews the suggested breakdown, opens shopping links and returns later to compare plans.
Feels	Anxious about overspending; reassured when every rupee is allocated and the remaining amount is shown.
Pains	Unclear price ranges, many websites to check, no record of earlier plans, tools that do not understand Indian brands or INR.
Gains	A clear category-wise plan, a calculation table, the remaining budget, ready shopping links and a saved history.

Design Implication

PocketSmart AI should ask for as little input as possible, show every amount in INR, display allocated and remaining budget clearly, make shopping links one click away, say plainly when an estimate is a fallback, and keep a history of past plans.

Team Ownership

Chitabatini Tanushree – user journey and interface; Srija Venkataraman – AI interaction; Madhumitha S – system workflow; Praveenkanth M – validation and reliability; Karthikha PR – documentation and communication.
