

Problem-Solution Fit

Date	04 October 2026
Team ID	POCKETSMART-TEAM
Project Name	PocketSmart AI – Smart Budget & Recommendation Assistant using Gemini Models
Maximum Marks	3 Marks

Problem-Solution Mapping

User Problem	PocketSmart AI Solution	Expected Value
Hard to split a fixed budget across categories	Gemini returns a category-wise allocation with a calculation table and remaining budget	Clear, balanced spending plan
Advice not tailored to India or INR	Prompts request Indian brands, INR prices and Indian platforms	More relevant, actionable suggestions
Too many sites to search	Search links for Amazon, Flipkart, IKEA, Swiggy, Zomato, BookMyShow, Tanishq and others are attached to each item	Faster move from plan to purchase
Outfit-specific jewelry choices	Optional outfit image is analysed by Gemini for colours, style and formality	Better matched recommendations
AI service unavailable	Rule-based fallback estimate is returned and labelled	The user is never left without a plan
Earlier plans are lost	Each result is saved to a per-user history	Easy to revisit during a session

Fit Assessment

PocketSmart AI connects each identified problem to an implemented feature: budget input → validated request → Gemini (or fallback) breakdown → shopping links → saved history.

Team Contribution

Madhumitha S – system and access fit; Chitabatini Tanushree – user experience fit; Srija Venkataraman – AI capability fit; Praveenkanth M – reliability and validation fit; Karthikha PR – documentation fit.
