Project Name	PocketSmart AI – Smart Budget & Recommendation Assistant using Gemini Models
Maximum Marks	2 Marks

Project Pitch

PocketSmart AI is an AI-powered budget assistant that turns a total budget into an itemised plan in INR for a home, a party or a jewelry purchase, adds shopping links for every item, and still gives a sensible estimate when the AI service is unavailable.

60-Second Explanation

1. A user registers and signs in.
2. They pick a planner and enter a budget and a few details (jewelry also accepts an outfit photo).
3. FastAPI validates the request and sends a structured prompt to Gemini.
4. Gemini returns a category-wise plan with estimated prices; the app adds shopping links.
5. If Gemini fails, a labelled fallback estimate is shown instead.
6. The plan is saved to the user's history and can be reopened later.

Speaker Allocation

- Backend Lead: problem, architecture and backend workflow.
- Frontend Lead: pages, planner forms and user experience.
- AI Integration Lead: Gemini integration, prompts, model fallback and shopping links.
- Testing & Documentation Lead: validation, fallback behaviour, tests and future improvements.
