

Project Demo Planning

Date	04 October 2026
Team ID	POCKETSMART-TEAM
Project Name	PocketSmart AI – Smart Budget & Recommendation Assistant using Gemini Models
Maximum Marks	2 Marks

Demo Plan

Preparation

- Verify the Python environment and install dependencies.
- Put a valid `GOOGLE_API_KEY` and a `SECRET_KEY` in `.env` (never show the file on screen).
- Start the server with `python main.py` and open `http://127.0.0.1:8000`.
- Prepare one sample account, one sample budget for each planner and one outfit photo (.jpg or .png under 5 MB).
- Remember that users and history are held in memory, so create the demo account after the last server restart.

Demo Order

1. Introduction – Backend Lead: problem and objective.
2. User Interface – Frontend Lead: landing page, registration, sign-in and dashboard.
3. AI Generation – AI Integration Lead: home, party and jewelry plans with shopping links.
4. History – Backend Lead: reopen a past plan.
5. Validation and Reliability – Testing & Documentation Lead: invalid input, fallback notice and the passing tests.
6. Closing – Backend Lead: architecture and future scope.

Backup Plan

If Gemini is slow or unavailable during the demonstration, the application automatically shows the labelled fallback estimate; explain this as a designed feature. Keep one pre-generated result and screenshots ready. Do not expose the API key on screen.
